

IT'S SPRING AND OSHINS OF SMILES IS IN FULL SWING!

Guiderland, NY - Thank you to all the children (and their parents/guardians) for coming to our open houses in February celebrating children's dental health month. We had such a great turnout and the children enjoyed crafts, learning about healthy snacks, seeing how all of the dental tools worked and receiving their Smile Bags. It is truly our hope that we took away their fear and that they go to their first dental appointment with big smiles!

At Oshins of Smiles we take great pride in providing our patients with high quality care using the most advanced technologies available! We believe our precise combination of knowledge, skill and revolutionary technologies enables us to deliver optimum results for each patient

We are very excited to announce we have added a new and exciting device to our office! Due to our continuing effort to provide our patients with the most modern, timesaving tools, Oshins of Smiles will now be utilizing an intraoral scanner to perform dental impressions.

The **Medit i500 intraoral scanner** offers unparalleled performance! This intraoral scanner drastically minimizes discomfort and time associated with creating dental impressions. A process usually carried out with trays of silicone putty, will now be replaced with a small, handheld device that creates 2D and 3D images of patients' teeth. This tool allows us to easily maneuver within a patient's mouth, providing a clear view of difficult-to-reach problem areas. Silicone putty, often referred to as "goop," was long viewed as a necessary evil in quality dental care. With the Medit i500 intraoral scanner, a quick scan of an individual's mouth provides full color, high-resolution images. Once the scan is complete, Dr. Oshins will have access to images featuring unprecedented detail, within seconds. These clear 3D digital impressions allows Dr. Oshins to view potential issues without causing the patient discomfort and explain treatment options and suggestions in an easy-to-view and understandable way.

Understanding the current state of your teeth and gums is simple when a clear, detailed image is available. Suggestions for improvement and additional care are more easily explained and understood.

With a continued commitment to providing the most appropriate and modern care, Dr. Oshins and his team will continue to offer high-tech solutions along with the quality, personal care we provide each and every day!

With Oshins of Smiles,
Dr. Steven Oshins
